APPLIED COMPUTER SCIENCE

Applied computer science is a part of the Computer Science Program.

Requirements for Majors and Minors

The computer science program offers majors in computer science and applied computer science and a minor in computer science. The primary difference between the majors is that the computer science major goes deeper into computer science, preparing the students for graduate study and research, while the major in applied computer science expects the student to develop connections between computer science and another field. No student can major in both computer science and applied computer science. Students interested in computer engineering can earn a B.A. in computer science or applied computer science and a B.S. in computer engineering through the Dual Degree program.

For full details on the major, please see the Computer Science (https://catalog.hiram.edu/undergraduate/schools/science-technology/computer-science/) section of the catalog.
