

# ENTREPRENEURSHIP MINOR - CHEMISTRY

---

## Minor Requirements

Students interested in pursuing an industrial career will also greatly benefit from a minor in entrepreneurship. In an increasingly complex global society, the ability to think “outside the box” and to integrate concepts, knowledge, and skills from the subject of chemistry is invaluable as students prepare to thrive in the various chemical industries. Students are taught to infuse scientific concepts and research experience with entrepreneurial thinking as part of the program. Students also learn the importance of networking and how science is best served through an interdisciplinary approach.

The entrepreneurship minor will enable any interested student to create an entrepreneurial focus to complement and enhance the chemistry major. The 20-22 credit minor consists of the following:

Code	Title	Hours
ENTR 20510	ENTR MIND/CREAT&INNOVATION:CM	4
